A rough metalled track in bad repair, part of the track from Chatalja to Cherkenskoi, crosses the line near this station

A cart-track also runs N to Istanjia.

This station is situated on the crest of a broad ridge the watershed of the Black Sea and the Sea of Marmara.

Leaving the station the line goes along the watershed, rounding the heads of some ravines running S., which are choked with a mass of low oak trees and brushwood

It takes an hour and a half to traverse this oak wood, after which the land becomes for a time quite uncultivated

An easy descent then leads into the broad valley of the Chorlu stream, which has steep banks and flows in a sandy channel.
